## Introduction

One of the main problems in the iGaming industry is the lack of transparency and, as a result, users distrust of traditional applications and online games. With blockchain, you can provide complete transparency, secure storage of user funds and non custodial gaming. This explains the growing popularity of gaming decentralized applications. In 2019, dApps from the gaming and gambling categories occupied the first six places in the ranking of the most popular decentralized applications.

A dApp is an application that runs without a backend in a decentralized computer system - for example, on a blockchain. Accordingly, the dApp uses the main advantages of the blockchain: transparency, reliability and data immutability. DAPP (Decentralized Application) consists of a backend code running on a decentralized peer-to-peer network. DAPP can also have a frontend-generated user interface that accesses the backend. No central server is required for DAPP to function: the interaction between users and providers is direct.

The emergence of blockchain technology and other digital assets has changed the way the world today now manages and conducts transactions. This technology has been adopted by various industries including the iGaming industry to improve on the existing method on which their day-to-day business activities are carried out. The transparency and immutability of blockchain technology helps creating a unique experience for players in the online gaming space.

**Real Bid Token (RBC)** is a blockchain-based community driven social iGaming experience that pays dividends to the players. The platform is filled with reward systems to give players many ways to win and earn over time.

**RBC** uses blockchain technology to create a decentralized platform, where the gaming processes are efficient, transparent, and provably fair. **RBC** will harness the maximum capabilities of blockchain technology, using the TRON network to provide gamers with numerous advantages which include: Low commission fees, fast transactions, minimum bets, increased security, non custodial betting and dividend sharing.

## iGaming

iGaming consists of playing games, including bidding via the internet. Factors such as the advancement of technology available (for example smartphones and apps), the higher trust of gamers paying online, and the increasing digitization of the world, are making the iGaming market see tremendous growth in many regions across the world.

The online bidding and chance industry are huge, with a market size of USD 53.7 billion in 2019 for online gambling and USD 7.5 billion for online lottery. Europe dominated the market in 2019 with a total size of 22.0 billion USD. The gambling market is expected to grow at a compound annual growth rate (CAGR) of 11.5% from 2020 to 2027, forecasting a USD 127.3 billion capitalization by that time. The convenience of a cashless mode of payment during gaming are likely to boost the iGaming market, during the forecast period.

**11.5%**  
**CAGR** 2020-2027

## Fair Play

Fair play is always a topic of discussion among Casinos and their customers. A fair play initiative was begun in 2018 to establish a fair gaming codex along with adequate terms of operation for casinos and consumers. Blockchain gaming is also in the 2021 trend list.

## Blockchain Bids & Gaming

Gaming on the blockchain has been on the rise, with actors like Wink, BlueBet and Dice2Win averaging more than a USD 4 million weekly transaction volume each. From what is currently reported on sites like Dappradar the top 25 casinos Dapps average more than USD 50 million in weekly transaction volume. If we account for a 2% casino edge, we are talking of at least USD 1 million in profits a week generated just by the top 25 casino Dapps.

## Why Real Bid Coin?

**Real Bid Coin** provides a secure and transparent blockchain-based gaming solution that offers a range of games for interested users. There are both famous games and new ones. Choose from a huge variety and enjoy your time. Thanks to blockchain technology, the whole process is completely secure and you don't have to worry about the platform's fairness.

**RBC** prides itself not only on excellent design and aesthetic satisfaction from using our platform, but also in a completely safe and fair gaming experience. One of our goals is to bring a decentralized system that makes the whole experience 100% trustless and manipulation free.

**RBC** is built on the TRON ecosystem because TRON offers a comfortable and convenient architecture for iGaming deployment.

## Transparency & Fairness

Blockchain technology is considered as a means by which true transparency can be encouraged in a given business of a digital context. **RBC** would be using blockchain technology "distributed ledger" to verify transactions on the platform, thereby eliminating the need for a third party.

## Community Driven

**RBC** prides itself to be community first. We want to build the first community driven iGaming platform where our players and community suggest our roadmap. **RBC** will be built on top of its community feedback and suggestions, and we want to keep it that way as we grow.

## Innovative Gaming Mechanics

At **RBC** we aim to disrupt the industry not only by leveraging blockchain but also by implementing innovative gaming mechanics to increase user engagement and retention. These include configurable and extensible bidding systems and complete gamification of the whole experience.

## RBC Token Summary

**Name:** Real Bid Coin

**Ticker:** RBC

**Type:** TRC20

**Decimals:** 12

**Volume:** 100,000

**Contract Address:** TWjwNdkQ1t8d84LwqqZdyJQRrHSyuoAurh

**RBC** will not be initially withdrawable at launch to keep trading from hurting initial incentives. Unlike other platforms which hold tokens hostage for an unknown length of time, withdrawals will open and **RBC** tokens will be listed on an exchange three months after launch.

To further boost the **RBC** ecosystem, the platform conducts a monthly token burning process, where a portion of the **RBC** token is destroyed. The continuous destruction of these tokens will increase their value. The burning of the **RBC** tokens will also maintain the balance between token holders and developers, support the distribution of the token model, and the payout of the dividends.

## Why TRON?

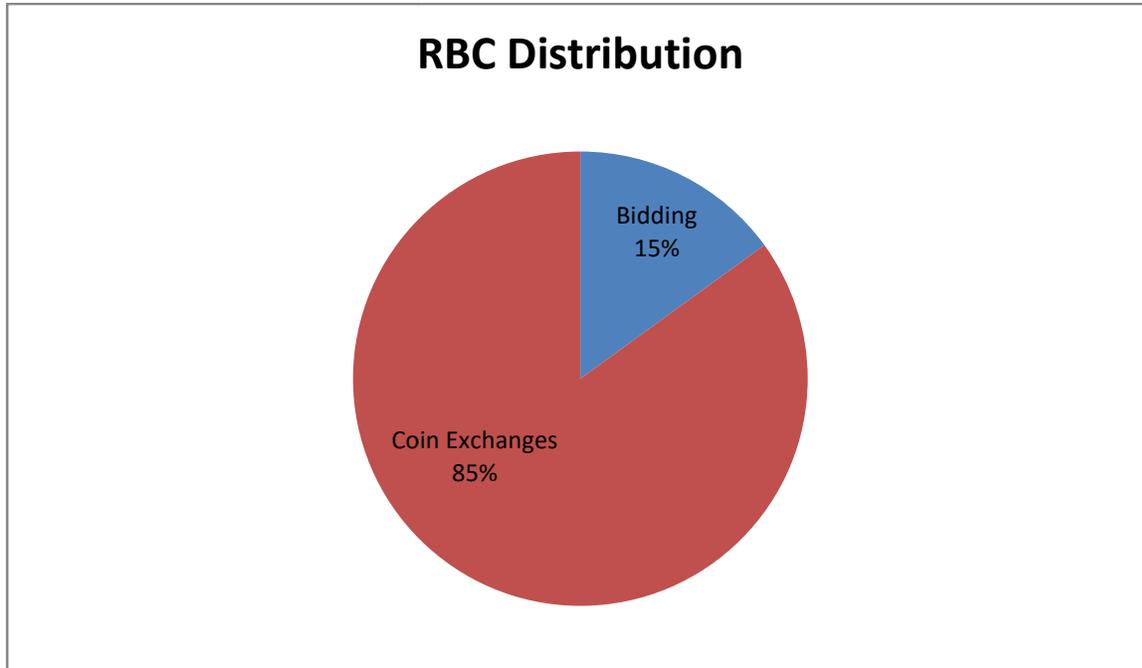

**RBC** intends to leverage TRON's ambition to establish "a truly decentralized Internet" to become the premier blockchain gaming platform across all chains. From our perspective, the TRON protocol has managed to meet expectations by becoming one of the largest blockchain-based operating systems in the world. We intend to take advantage of TRON's high throughput and scalability to provide the best user experience possible for the community we serve.

As blockchain technology proliferates through modern society, **RBC** will help bring about mass adoption by engaging and educating the everyday consumer..

**RBC** will utilize the TRON network's 2000 TPS capacity and 3 second block times to provide instantaneous bidding and reliable service no matter how big the platform grows. **RBC** has also developed its own scaling solutions that have been implemented in games like slots and poker. These optimizations have pushed **RBC's** gameplay to the forefront of industry standards.

## Token Distribution & Release Schedule

### Release Schedule

- 2 coins a day through bidding
- Issuing 15,000 coins will take 20 years

## Utility

- Bid points are required to participate in bidding. A bid point is paid for by making an equal value purchase.
- 25% of revenue from bid points is moved towards the coin's liquidity to increase its value.
- Retail shops are turned into tie-up shops so that HODLers of the **RBC** coin can enjoy benefits such as discounts on bid points at these shops.
- Shopkeepers pay the company the same amount as the coin, of which, in turn, 25% is moved towards increasing coin value.
- Membership options where members can purchase the **RBC** coin through the tie-up shop.
- Opportunity to place **RBC** coins with financial institutions as collateral.
- Use of the current 15 outlets for home delivery of FMCG products, purchased using the **RBC** coin.

## Our Vision
